Gillfab® 3072 h-Profile

DESCRIPTION

Gillfab®3072 is a formed 'h' profile produced with layers of woven glass reinforced phenolic and a white Polyvinyl Flouride (PVF) film overlay on the face side. Profiles are available in four different channel heights for proper interface with Gillfab® 4422 sandwich panels.

APPLICATIONS

Gillfab® 3072 h-profile is used to produce the frame around the periphery of the decompression panels installed in the lower cargo hold of Airbus Industries A300, A310, A300-600, A318, A319, A320 and A321 aircraft. This product can be used for both the repair and the manufacture of replacement decompression panels.

FEATURES

- Economical alternative to metal profiles
- Fire-resistant (meets FAR Part 25, Appendix F, Parts I and III)
- Corrosion resistant
- Service temperature -40°F to 158°F (-40°C to 70°C)
- Good break strength to ensure pressure compensation between the pressurized cabin and the cargo compartment

To ensure correct functioning of the decompression panel assembly, the corresponding sandwich panel and h-profile must be used together. Failure to follow this procedure can cause a change in geometry of the assembly, resulting in possible malfunctioning during a decompression event. See the reference tables below for identification and reference dimensions for h-profiles and corresponding decompression panels, and sandwich panel and h-profile assembly for decompression panels.
